

Dear student:

Starting something new like cloud computing can be intimidating. Especially when you're building vital career skills. That's why we released 2 brand new "baseline" Quests, designed to get you up and running in the cloud. That's 24 new intro-level labs, the perfect way to introduce yourself to different cloud services like [Google Kubernetes Engine](#) and [Cloud ML Engine](#). At the end of each lab in these Quests, you have gained a basic understanding of the service and how to use it.

Here are the new Quests:

- **Baseline: Infrastructure Quest:** In these ten short hands-on labs, you will get your first-touch experiences with the Google Cloud services. Get training on basic infrastructure building blocks that make up core components of any production cloud environment. These labs are meant to give you a "baseline" understanding of what each set of tools can do for you. Perfect if you're just getting started with Google Cloud, or with the cloud in general! [Enroll now.](#)
- **Baseline: Data, ML & AI Quest:** Another "baseline", you will get your first-touch experiences with a subset of the Google Cloud services that provide tools for working with big (and small!) data and machine learning / artificial intelligence services in Google Cloud. [Enroll now.](#)

When you finish your Quest, you earn a badge. Your badge is a cloud credential that represents the skills you learned, and your "flight time" in the Google Cloud. Act now and be one of the first in the world to add these two badges to your resume and your social profiles:

Whoa, you got to the last paragraph of the email! Congrats, you're getting a special invitation to Google Cloud webinars next week, Feb 12-13. There are many sessions to choose from, like [hearing how leading APAC customers](#)

[GO-JEK, Smart Parking, and Omise](#) are using Google Cloud, [how to get started with Google Cloud in 10 minutes](#), and more. These webinars span time zones, so feel free to pick any sessions that suit your schedule. Good luck on your next Quest, and hope to see you online at a webinar session or two!

Cheers,

Emily at Qwiklabs

PS: If you're an Advantage subscriber, all 24 new labs are included in your subscription at no extra cost. Not a subscriber yet? Join anytime, [here](#).
